Reliance on Third Party Information

The views expressed here contain information that has been derived from publicly available sources that have not been independently verified. No representation or warranty is made as to the accuracy, completeness or reliability of the information. This presentation should not be relied upon as a recommendation or forecast by BHP Billiton.

Forward Looking Statements

This presentation includes forward-looking statements within the meaning of the U.S. Securities Litigation Reform Act of 1995 regarding future events and the future financial performance of BHP Billiton. These forward-looking statements are not guarantees or predictions of future performance, and involve known and unknown risks, uncertainties and other factors, many of which are beyond our control, and which may cause actual results to differ materially from those expressed in the statements contained in this presentation. For more detail on those risks, you should refer to the sections of our annual report on Form 20-F for the year ended 30 June 2010 entitled “Risk factors”, “Forward looking statements” and “Operating and financial review and prospects” filed with the U.S. Securities and Exchange Commission.

No Offer of Securities

Nothing in this release should be construed as either an offer to sell or a solicitation of an offer to buy or sell BHP Billiton securities in any jurisdiction.

Non-GAAP Financial Information

BHP Billiton results are reported under International Financial Reporting Standards (IFRS). References to Underlying EBIT and EBITDA exclude any exceptional items. A reconciliation to statutory EBIT is contained within the profit announcement, available at our website www.bhpbilliton.com.

- **Beliefs behind commodity demand forecasts**
- Evolution of commodities demand
- Well positioned for diversified, tier 1 growth
- Concluding remarks

Above trend GDP growth forecast for the next decade despite softer OECD fundamentals

Global GDP growth rate
(% per annum)

GDP growth has two main drivers

- **Demographic** factors including the size and age profile of a population and degree of urbanisation
- **Productivity** factors including education, infrastructure and the efficiency of capital allocation

China will become increasingly influential

- Despite the global financial crisis, global growth rates improved in the last decade
- Decelerating Chinese growth rates are expected to be offset by the larger size of the Chinese economy

Source: 1900 to 1980 – J. Bradford De Long (“Estimates of World GDP”, 1998); 1980 to 2010 – IMF World Economic Outlook Database; 2010 to 2025 Forecast – Global Insight.

The positive global outlook doesn't rely upon aggressive underlying assumptions for China...

Urbanisation rates

- In the first half of this decade 20 million people per year will move into cities
- However, the rate of urbanisation will slow

Construction

- The rate of growth in construction will decelerate in the next decade
- By 2025 the rate of addition of new urban floor space will fall by half

Infrastructure

- New city clusters will develop requiring new transportation and energy infrastructure
- Development of the Western Provinces will be resource intensive

Source: Global Insight.

...nor unrealistic assumptions for Chinese consumption growth

Consumption has grown at a rapid rate

- Consumption has been growing rapidly although less than overall GDP growth
- Incomes will be driven by labour productivity
- Rising incomes will support consumption of goods and services

With the transition in the economy, GDP targets can be met with slowing investment

- In the last decade, investment growth (~12%) has outpaced consumption growth (~8%) with resultant overall GDP growth of ~10%

Source: Global Insight.

China has and will continue to enact policy to deliver a sustainable growth model

Great Hall of the People, Beijing

Policy is focused on sustainability

- Income and wealth distribution to place higher priority on individuals
- Increasing domestic demand focus

Policy to further support consumption

- Improvements in welfare, education and health reducing the need for precautionary savings
- Provision of 36 million new social housing units
- Shift in tax structures to promote consumption

The economic mix and structure will shift

- New development will take place in the west and the interior of China
- More funding will be placed into research and development, and into higher value industries

Importantly, China has a track record of delivering

GDP growth target versus actual growth (%)

- Beliefs behind commodity demand forecasts
- Evolution of commodities demand
- **Well positioned for diversified, tier 1 growth**
- Concluding remarks

BHP Billiton is well positioned for early and late stage economic development

Underlying EBIT
(H1 FY11, US\$ billion)

Underlying EBIT margin¹
(H1 FY11, %)

1. Excludes third party trading.

Significant investment underpins our tier 1 growth strategy

Strong pipeline of investment (US\$ billion)

Note: Excluding sustaining capital and exploration expenditure and future investment associated with the acquisition of the Fayetteville Shale.

- Beliefs behind commodity demand forecasts
- Evolution of commodities demand
- Well positioned for diversified, tier 1 growth
- **Concluding remarks**

Concluding remarks

- Strong global GDP growth to continue
- Increasing impact of emerging economies on global growth
- China growth assumptions are realistic
- Relative commodity demand intensities to evolve over time
- BHP Billiton is well positioned to meet the growth opportunity as well as the evolution in demand intensities
